

## **UICC and the Chinese Anti-Cancer Association (CACA) Chinese Fellowship Programme**

### **Testimonial**

**Dr Qinying Liu, Fujian Provincial Cancer Hospital**

**2015 Chinese Fellowship Research awardee**

**Host institution: MD Anderson Cancer Center, Texas, USA**

“My project “**Anti-cancer efficacy of anti-PD-L2 antibody**” goes well until now. It is a big project, which needs a lot of researchers to cooperate together. In the last 3 months, I have just tested the expression of PD-L1 and PD-L2 in over 50 cancer cell lines to make sure that which types of cancer are related to PD-L1 and PD-L2 expression tightly. We want to generate some mouse cell lines with high expression of PD-L1 and PD-L2 now, and then, we will make mouse model, and test the anti-cancer efficacy of anti-PD-L1 and PD-L2 antibodies in vivo.

My mentor Dr. Curran is a very nice person. He discusses the project with me and teaches me how to do the experiments, how to run the machine and how to analyze the data. The colleagues in our lab are also very nice. I hope I can learn more in the future, and of course, I hope I can complete the project within one year. I really appreciate that I have such good and happy experience in M.D. Anderson.”
